

Your configurator for mechanical and plant engineering

You are searching for the perfect tool to define standards, unitize your products, and automate your processes? **CAS Configurator Merlin** supports you in digitizing your sales process: knowledge is logically stored, products are easily configured, and quotes are professionally created. From batch size 1 to fully automated configuration of default components.

We know your challenges

- Only a few employees share the knowledge of your highly complex products
- Internal communication efforts run high, especially if custom solutions are required
- Your sales orders are currently still manually adopted in the ERP system
- Rudimentary rule checks during the sales process lead to inaccurate quotes

With our solutions, you can

Transport expert knowledge into a graphical environment that is easy to grasp and can be adjusted intuitively

Use existing ERP data (e.g. maximum bill of materials) for sales purposes and to create a knowledge **base**

After offers have been accepted, **automatically** resolve bills of materials in the ERP system and directly **create orders**

Decrease the necessity for **coordination** during the sales process by systematically recording custom solutions
